

TenantEye

Tenant Billing/Invoicing and Sub Metering made Easy!

Product Overview

The CSI³ TenantEye is the most open, flexible and easy to use interface for Tenant Billing available today. It is also the first oBIX compliant Tenant Billing package ever!

There are many Tenant Billing packages available on the market today, but none that offers the integration and flexibility as TenantEye.

Ultimate Integration

Being built on Tridium Inc.'s NiagaraAX Framework™, allows CSI³ TenantEye to access a nearly unlimited number of drivers available for the automation market today. Every open protocol from BACnet™ to Lonworks™ to Modbus™ to OPC to oBIX, and many of the currently installed proprietary devices, can be easily integrated into and made available for tenant override and control. In addition, ALL of this is available to both the owner and the tenants through a standard web browser.

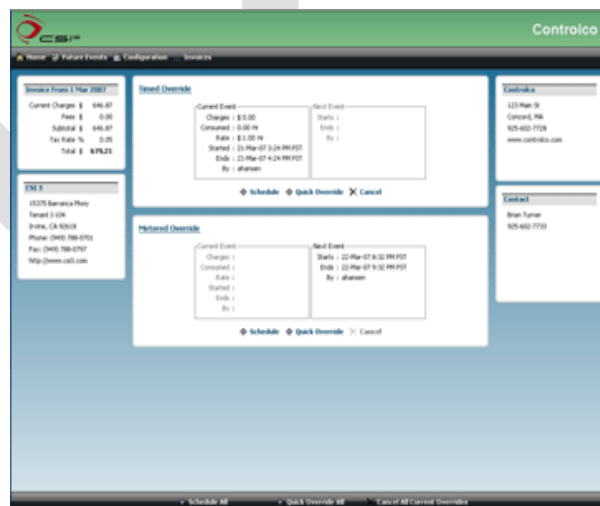

Flexible Features and Functions

- Powerful rate scheduling – nearly unlimited rates can be created
- Multiple meters per tenant – no limit to what can be metered or controlled
- Real-time metering and invoicing – through the use of a real-time control engine for all systems
- Web access for owners and tenants
- Automated monthly invoices – these can be scheduled on a timely basis and automatically emailed as PDF
- Tenant Managers have the ability to add/delete users through the web configuration

The ease of use of TenantEye is second to none. You can go from zero to advanced tenant billing in no time for a fraction of the cost of a typical Tenant Billing application!

Invoicing Made Easy

From the creation and automation of monthly invoices, to the flexibility of the owner to be able to look at and generate invoices for any and all tenants on the fly, CSI³ TenantEye takes care of all of your invoicing needs.

Main tenant metering and override window, displaying tenant overrides, metered overrides, current billing amounts and cycle and accumulated totals.
