

Niagara Port for the Dell Edge Gateway

With Kodaro's Niagara Port, the Dell Edge Gateway is more powerful than any piece of equipment the building automation industry has seen. Here's why:

Server, supervisor and control engine in one:

Allows an operator to use the Edge Gateway as a workstation, run applications and manage the network at the same time.

Incredible storage capacity:

Storage configurations up to 256 GB so you can process larger amounts of data, making it possible, for example, to capture years of trend data at high intervals.

Full Niagara integration:

Kodaro's Niagara port enables the full potential of Tridium's building automation software on the Dell Gateway while also providing capability to run simultaneous applications like an analytics engine.

Secure:

With Dell's trusted name and the added end-point security of the Intel TPM chip that come standard, the Edge Gateway may be the most secure hardware that Niagara has ever run on.

Designed for commercial and industrial applications:

Everything you need in one solid state, no moving parts. Put it anywhere - mounted on a wall, tucked into a cabinet.

Cloud ready:

The machine runs locally and comes with secure methods to move data to the cloud. A ready-to-install secure tunnel to cloud infrastructure is also available if needed.
